## Profile Summary

- Develop and enhance Siemens's core web UI declarative framework called "**Siemens Web Framework (SWF)**", which Siemens industry PLM software products like Active Workspace, etc are built upon. This is the backbone of Siemens' Cloud strategy, for building industry scale applications with consistent layout.
- Extensive experience in architecting and developing
  - **Web**: Vanilla **Javascript (ES6)**, AngularJS, React
  - **Server side** and bundling app: **NodeJS**, ExpressJS, Gulp, Webpack
  - Unit Testing: karma; BDD Testing: Basic Cucumber and Puppeteer
  - Version control: **Git** and CI/ CD in Gitlab
  - Basic configuration and scheduling of jobs using Jenkins
- Previous experience with analysis, design, development and maintenance of web applications using front end development tools for our **IBM US Client: Suntrust Bank Inc.**, with a team of 25 to 30 people, implemented using Agile Methodology.
- Proficient in analyzing and translating business requirements to technical requirements and architecture and then leading as well as doing development.
- Experience in leading mid-size teams (5-6 people). **Handled role of Technical Lead in IBM**.
- Also been part of android mobile application development side-project (using core Java and XML) for internal use by our (client) Suntrust bank's employees.

## Education

**2009 – B.Tech (CSE)** from Uttar Pradesh Technical University (UPTU), India.

## Career

Infosys (Jan'10 – Jun'13)

IBM (Jun'13 – Mar'18)

Siemens (Mar'18 onwards)

## Skill Set

Frontend (UI/ UX)

HTML, CSS, JavaScript (ES6)

Core Java (Android Development & Design)

Algorithms

SQL/ NoSQL Database

JavaScript technologies and frameworks
(React, AngularJS, Node.js, Socket.io, WEBRTC)

Cloud(IBM Bluemix & AWS)

REST API Development

## Roles and Responsibilities

- At **Siemens** (Current):

As a Senior Developer, developed Siemens Web Framework (SWF)

- It is a configuration first framework that lets you rapidly develop web applications with significantly less code to write, test, maintain and download at runtime. It follows top trends in the front-end development like component-oriented design, declarative coding, consolidation of state management, SPA and client-side routing & extensions via JS code to manage application complexity.
- We have made it declarative to make it agnostic to rapid changes to underlying web technologies frameworks. The framework takes care of those changes, like when we switched from gulp based bundling to webpack based, the framework customers didn't notice any changes except lesser time taken.
- I was part of the 20 members team, which used latest Agile methodology to build and maintain this framework, which included it's main code base (as an npm package), supporting libraries, tutorials, support wiki and documentation.
- Identify work process improvements and implement new technologies.
- Utilize in-depth knowledge of functional and Technical experience in web technologies, especially front end part in conjunction with industry and business skills to deliver solutions to customer

**Team Size: 20 to 25.**

- At **IBM** (June 2013 to March 2018):

As a Senior Developer, responsible for Analysis, design, development, testing and implementation of web application (using HTML, XSL, JavaScript, .NET and ARGO Customization tool) for new implementations and upgrades for our IBM US customer SunTrust Bank.

As a Technical Lead, responsible for mentoring and leading new team members to understand whole application process and deliver bug-free solution in each release, after proper review.

- Deliver new and complex high quality solutions to clients in response to varying business requirements
- Meet programming standards by following production, productivity, quality and IBM defined customer-service standards.
- Translate customer requirements into formal requirements and design documents, establish specific solutions, and leading the efforts including programming and testing that culminate in client acceptance of the results.
- **Key projects handled so far include AML (Anti Money Laundering) implementation, FATCA implementation and SNET upgrade.**

**Team Size: 25 to 30.**

## Professional Certifications & other Achievements

- IBM Certified Application Developer – Cloud Platform – v1.

URL:
https://www.ibm.com/certify/members/profiles.nsf/LinkedInHome?OpenForm&authlinkedin=IBM028ZU6PK959613MY

- Received the prestigious "SPARK AWARD" by IBM for first half of 2017. It is given to very few across IBM who drive innovation and display excellence in behavior that helps IBM deliver client delight.
- Proposed next generation mobile to cash payment system during a bank wide internal innovation/ ideation event called "RISE", in 2015. Our small team (of 4 people) had demonstrated the idea along with its prototype among final 10 teams from all over the world. It didn't win but got honorary mention.
- Received "IBM Deep Skill" award consistently for 5 quarters, eligibility of which is assessed each quarter. It is given for demonstrating proficiency in a high demand and IBM-designated critical skill.
- Received "IBM Manager Choice Award" five times for "Dare to create original ideas", "Show personal interest", "Unite to get it done", "Put the client first" and "Share Expertise". This award is given by managers to direct reports who demonstrate IBM values and practices.
